8+ years of professional experience in web development with specialization in frontend, leading a platform with 500k DAU through innovative performance optimizations and team leadership

Technical Skills

Languages : JavaScript, TypeScript, HTML, CSS, Python, MySQL
Frameworks : React, Redux, Next.js, SASS, Node.js, Angular, Jest, Puppeteer, Styled Component, GraphQL
Technologies : Webpack, AWS (S3, CloudFront, Route53), WebAssembly, WebRTC, Babel, SEO, Lighthouse

Work Experience

BlueStacks (now.gg)

Gurugram, IN

Tech Lead

Apr 2023 – Present

- Pioneered and implemented Image optimization service, serving up to ~60% smaller images for web, utilized **HTTP/3** and **AVIF** format, **reduced page weight by 40%**
- Created a Flash-to-HTML games conversion utility and a [chrome extension](#) to reduce time to discovery and publishing **from 1hr to 10mins**, resolving pain points expressed by the Operations team
- Formulated responsive homepage using best practices for SEO, performance, maintainability and usability, serving as an entry point to now.gg for **70k unique** users daily
- Implemented seamless analytics to gain valuable **insights** and enhanced decision making processes
- Created **Requirements and PR templates** in process to avoid regressions and improve code quality
- Interviewed, and mentored **~6 developer** throughout SDLC, increased capacity to build and scale rapidly

Senior Member of Technical Staff

Dec 2020 – Apr 2023

- Compiled and integrated config based Input Mapper utility from **BlueStacks (C++) to WebAssembly** for modern browsers, saving cost on development and maintenance by **reusing existing codebase**
- Planned and implemented **offline mode in BlueStacks** desktop client using service workers, allowed users to play installed games or install more apps through APKs without internet
- Implemented **Story Book** for consistency in design system and overall communication across team
- Created **Requirements and PR checklists** for team to cover edge cases in requirements and self review

Josh Technology Group

Gurugram, IN

Tech Lead

Oct 2019 – Dec 2020

- Upgraded Grunt/Bower-based build system to **Webpack/Yarn**, enabled usage of modern libraries / tools
- Spearheaded Interviews and expanded **frontend team from 6 to 20**, optimized strategy by introducing more practical and pair programming rounds early on

SDE II

Oct 2017 – Oct 2019

- Revamped and delivered multiple MVP products across frameworks and domains rapidly
- Integrated **mjml** email template framework over **Django** to reduce regression and developer efforts

SDE I

Jun 2016 – Oct 2017

- Implemented Bidirectional-Infinately scrollable component in calendar widget of a hybrid mobile application
- Delivered highly accessible auctioning platform with **IE8 support** and compatible **email templates**

Projects

- **AutoBlogger** - Designed and implemented a web scraper that re-wrote content from multiple blogs, and published periodically to WordPress using Node.js.
- [WhatColor](#) - Built for individuals with color blindness, this **Android app** shows color codes, names, and palettes by tapping on any part of the image, achieving 1k+ downloads.

Education

- B.Tech in Computer Science, JNIT, Jaipur, Raj

Aug 2012 - Aug 2016
